TITLE

COMPOSITIONS COMPRISING CROSSLINKABLE COMPOUNDS AND  
ELECTRONIC  
DEVICES MADE WITH SUCH COMPOSITIONS

10

ABSTRACT OF THE INVENTION

The present invention relates to novel cross-linkable polymers and a wide variety of electronic devices containing at least one layer having the polymer. The compounds can function as monomers, and copolymers 15 can be formed from such monomers, such copolymers comprising, as polymerized units, a plurality of units of the compounds.
